LAPORAN TUGAS KECIL I

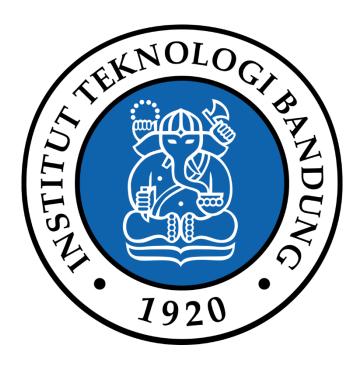

"Penyelesaian Word Search Puzzle dengan Algoritma Brute Force"

Laporan Ini Dibuat Untuk Memenuhi Tugas Perkuliahan

Mata Kuliah Strategi Algoritma (IF2211)

KELAS 02

Dosen: Dr. Nur Ulfa Maulidevi, S.T., M.Sc.

DISUSUN OLEH:

Rava Naufal Attar (13520077)

SEKOLAH TEKNIK ELEKTRO DAN INFORMATIKA
INSTITUT TEKNOLOGI BANDUNG
SEMESTER II TAHUN 2021/2022

Algoritma Brute Force

Pertama dilakukan pembacaan file dari file.txt, kemudian data dari file tersebut akan diolah dan dipisahkan menjadi dua bagian yang berbeda.

```
char[][] puzzle;
String[] keys_arr;
```

Sebagian besar program dikontrol oleh variabel,

```
Boolean found;
Int[] keys stat;
```

yang mana *variabel found* akan bernilai *True* apabila semua keyword dari puzzle telah ditemukan. Sedangkan untuk *array keys_stat* menyatakan status dari setiap keyword yang terdiri dari 0/1 yang merepresentasikan keyword ke-i telah ditemukan apabila keys_stat[i] = 1.

Program akan mengiterasi setiap elemen dari matriks puzzle disetiap pencarian kata. Kemudian disetiap iterasi elemen tersebut, akan dilakuikan pencarian dengan referensi arah mata angin. Yang mana pada kode program direpresentasikan sebagai berikut.

0: Utara

1: Timur Laut

2: Timur

3 : Tenggara

4 : Selatan

5 : Barat Daya

6: Barat

7: Barat Laut

Pada setiap pencarian kata tersebut, apabila kata telah ditemukan maka program akan menampilkan kata, matriks huruf dari kata yang ditemukan tersebut, dan jumlah perbandingan huruf yang dilakukan untuk menemukan kata tersebut.

Pencarian kata akan selesai apabila *array keys_stat* telah terisi dengan angka 1 pada setiap elemennya, yang berarti setiap keyword telah ditemukan.

Variables	Keterangan
char[][] puzzle	Matriks huruf dari puzzle
int puzzle_rows	Jumlah kolom matriks puzzle
<pre>int puzzle_cols</pre>	Jumlah baris matriks puzzle
String[] keys_arr	List dari keywords yang ingin dicari
<pre>int[] keys_stat</pre>	Status dari setiap keywords yang ada
<pre>int[] key_comp</pre>	Jumlah perbandingan huruf yang dilakukan untuk menemukan kata didalam puzzle
boolean found	Menyatakan apakah seluruh keyword telah ditemukan atau belum
int key_count	Sebagai iterasi untuk setiap keyword yang ada
int row	Sebagai iterasi baris matriks puzzle
int col	Sebagai iterasi kolom matriks puzzle
<pre>int dir_state</pre>	Sebagai iterasi pada saat pencocokan huruf dengan referensi arah mata angin
<pre>int boundary_length</pre>	Panjang batasan dalam matriks puzzle
<pre>int x_boundary</pre>	Batas horizontal dalam matriks puzzle
<pre>int y_boundary</pre>	Batas vertikal dalam matriks puzzle
<pre>int finding_idx</pre>	Sebagai pencatat indeks pada saat pencocokan huruf
String curr_key	Sebagai penunjuk keyword yang sedang di cek
<pre>long startTime</pre>	Sebagai pencatat waktu eksekusi program

Methods	Keterangan
<pre>public static void displayMenu()</pre>	Untuk menampilkan layar awal
<pre>public static char[][] readPuzzle(String file)</pre>	Untuk membuka file dan mengembalikan matrix dari puzzle
<pre>public static String[] readKeywords(String file)</pre>	Untuk membuka file dan mengembalikan array dari keywords
<pre>public static char getCharFromString(String str, int index)</pre>	Untuk mendapatkan char dari suatu string
<pre>public static void fillKeystat(int[] keys_stat)</pre>	Untuk menginisialisasi array status dari key sama dengan nol
<pre>public static int[][] clearArr_2d(int[][] array)</pre>	Untuk mengosongkan array 2D
<pre>public static boolean isRowCol_avail(int row, int col, int[][] keys_constructors)</pre>	Untuk mengecek keberadaan suatu titik {row, col} pada array 2D dari posisi keyword yang ditemukan
<pre>public static boolean isAllOne(int[] array)</pre>	Untuk mengecek apakah semua elemen pada array bernilai sama dengan satu
<pre>public static void print_key_found(char[][] puzzle, String key_word, int key_comp, int[][] key_const)</pre>	Untuk menampilkan keywords yang ditemukan, posisinya pada puzzle, serta jumlah perbandingan huruf yang dilakukan

Source Program

```
package src;
import java.io.*;
import java.util.*;
